High-Resolution 2D & 3D

Fine Art & Commercial Scanning

THINK OF THE POSSIBILITIES!

Parallax is pleased to now offer state-of-the-art digital scanning services for fine art, commercial, and architectural items. We'll transform your artwork or architectural item into an ultimate high-quality, print ready digital file.

Since there is no glass face touching your original, this state-of-the-art technology enables scanning of art or other fragile materials. For example, oil and acrylic paintings, and other media that isn't completely cured, can be scanned without the risk of damage.

Virtually anything up to 36" x 60" and 4" in thickness can be scanned, including:

***Archives - Photos - Historic Art - Watercolor Art - Oil Paintings - Acrylic Paintings - Giclée Prints
Mixed Media / Collage Art - Glass (Stained Glass / Other Media) - Tile / Ceramics - Fabrics
Architectural Items - Textiles - Ceiling Tile - Metal***

We can scan above examples without removing the frame in most circumstances.

This scanner allows for significant control of the resulting image - including depth, shadow, texture and detail - producing an amazingly clear, professional result.
